PROFESSIONAL SUMMARY

Full Stack Engineer with 4+ years of building large-scale, distributed web platforms and APIs, taking full ownership of subsystems across design, development, testing, deployment, observability, and monitoring. Strong CS foundation in data structures, algorithms, and OOD; hands-on experience with Java/Spring Boot backend services, React/Next.js frontends, RDBMS and NoSQL data stores, and RESTful microservices serving 10M+ users at 99.9% uptime. Proven track record delivering in agile, TDD, and CI/CD environments — practicing test automation, code review, technical documentation, and on-call support for always-on, 24/7 production systems — while contributing to AI-driven evaluation and prompt-engineering work.

EXPERIENCE

Senior Software Engineer

May 2026 — Present

Debut Infotech

- Own multiple subsystems end-to-end — design, development, testing, deployment, and monitoring — leading frontend and backend development in Next.js, React, and Node.js with SEO-optimized, server-side rendered pages and dynamic routing.
- Architect and maintain scalable, well-tested REST APIs and backend services in Node.js, establishing coding standards and leading code reviews adopted across the engineering team.
- Mentor engineers through code review, technical design discussions, and agile sprint planning, improving team velocity and delivery quality.
- Drive end-to-end feature ownership from scoping to production, practicing test automation and continuous integration to ensure zero critical post-release defects.

Software Engineer — AI Evaluation (Freelance)

Dec 2025 — Apr 2026

Alignerr

- Evaluated 100+ Claude- and LLM-generated backend and full-stack solutions against real-world engineering standards, flagging correctness, safety, and scalability issues in Python and Node.js.
- Compared multiple implementations on trade-offs in performance, scalability, and risk, improving average solution quality scores by 20%.
- Designed and validated prompts simulating attack vectors, edge cases, and misuse scenarios, improving robustness of LLM-based AI systems.
- Applied structured reasoning around system failures, ambiguous inputs, and adversarial behavior, aligned with Trust & Risk Engineering principles.

Programmer Analyst — Full-Stack Engineer

Aug 2022 — Oct 2025

Cognizant

- Designed and maintained distributed microservices in Java (Spring Boot) and Node.js serving 10M+ users, taking full ownership of critical subsystems' life cycle — design, development, testing, deployment, and monitoring — and achieving 99.9% uptime.
- Built responsive, testable UIs with React.js, Next.js, and Vue.js, reducing page load times by 30% through code-splitting and caching optimizations.
- Designed RESTful APIs and microservices architecture for large-scale distributed systems, cutting average API response time from 400ms to under 120ms.
- Wrote test automations and practice continuous integration/continuous delivery, conducting code reviews for the team and maintaining technical documentation to support production applications.
- Led engineering support and on-call rotations for an always-on, 24/7 site; implemented observability with Prometheus and Grafana and distributed tracing, cutting MTTR for production incidents by 35%.
- Built Python-based data processing pipelines and automation scripts, reducing manual processing time by 40%; developed ML-assisted anomaly detection and a scikit-learn recommendation module integrated into Spring Boot services via REST.
- Managed deployments on AWS using Docker, CI/CD pipelines, and terraform, reducing deployment cycle time by 50%.

Programmer Analyst Trainee

Jan 2022 — Jul 2022

Cognizant

- Built full-stack applications using Spring Boot and React, translating design documents into clean, well-tested, maintainable production code with a focus on predictable behavior and testability.

- Developed backend services emphasizing clean architecture, defensive coding, and robust error handling.
- Wrote Python scripts for test data generation and automated validation, cutting manual QA effort by ~25%.
- Wrote unit and integration tests achieving 80%+ code coverage, ensuring reliability and maintainability across services.

KEY PROJECT ENGAGEMENTS (VIA COGNIZANT)

Macy's — Full Stack Engineer

Jul 2025 — Oct 2025

- Built production-grade UI components for large-scale POS systems across 500+ retail endpoints, meeting strict correctness and performance benchmarks.
- Investigated data mismatches and latency issues by analyzing SQL queries and transactional flows, resolving 15+ recurring production defects.
- Wrote Python scripts to reconcile and validate POS transaction data, catching data integrity issues before they reached production.

DIRECTV — Full Stack + DevOps Engineer

Nov 2023 — Jun 2025

- Designed and operated high-availability Spring Boot + React services for 5+ internal teams, maintaining 99.95% uptime over 18 months.
- Automated infrastructure health checks and log analysis with Python, reducing manual debugging time for distributed failures by 45%.
- Debugged distributed production issues using logs, metrics, and tracing, cutting incident resolution time from hours to under 30 minutes.

LN Payments — Full Stack Engineer

Aug 2022 — Oct 2023

- Built UI and backend services for a payments platform handling \$2M+ in daily transactions, prioritizing correctness and data consistency.
- Implemented asynchronous workflows using Spring Boot, processing 50K+ events per day with zero message loss.
- Ensured data integrity across transactional systems, reducing reconciliation errors by 60%.

SKILLS

Languages: Java, Python, JavaScript, SQL

Backend & Distributed Systems: Spring Boot, RESTful APIs, Microservices, Distributed Systems, API Versioning, JWT

Frontend: React.js, Next.js, Vue.js, Three.js, HTML, CSS, Tailwind

Databases (RDBMS & NoSQL): PostgreSQL, MySQL, MongoDB, Redis, SQL Performance Tuning

Testing & Quality: TDD, CI/CD, Test Automation, Unit & Integration Testing, Code Review

Observability & Reliability: Prometheus, Grafana, Dynatrace, Distributed Tracing, Incident Response, On-Call Support

Cloud & DevOps: AWS, Docker, Kubernetes, GitHub Actions, Jenkins, Terraform, CI/CD

AI & ML: pandas, NumPy, scikit-learn, LLM Evaluation, Prompt Engineering, Hugging Face, Claude, n8n

Methodologies & Collaboration: Agile/Scrum, Cross-functional Delivery, Technical Documentation, Evidence-Centered Design

EDUCATION

B.E. / B.Tech, Chitkara University — Rajpura Aug 2018 — May 2022

CGPA: 8.68 / 10

CERTIFICATIONS

- AWS Certified Cloud Practitioner — Foundational
- AWS Certified Developer — Associate
- AWS Certified AI Practitioner
- GitHub Copilot Certification
