PROFESSIONAL SUMMARY

Full Stack Engineer with 4+ years building distributed systems and web applications serving 10M+ users. Experienced in Java, Python, React, and cloud infrastructure, with hands-on work in ML integration and AI evaluation. Proven track record of reducing latency, improving reliability, and shipping production features across payments, media, and retail domains.

EXPERIENCE

SENIOR SOFTWARE ENGINEER

May 2026 — Present

Debut Infotech

- Lead frontend and backend development of the company's main website using Next.js, React, and Node.js, delivering performant, SEO-optimised pages with server-side rendering and dynamic routing.
- Architect and maintain scalable REST APIs and backend services in Node.js, establishing coding standards and best practices adopted across the engineering team.
- Mentor and guide a team of engineers through code reviews, technical design discussions, and agile sprint planning, improving team velocity and overall delivery quality.
- Drive end-to-end feature ownership from requirement scoping to production deployment, ensuring high reliability and zero critical post-release defects.

SOFTWARE ENGINEER (Freelance)

Dec 2025 — April 2026

Alignerr

- Evaluated 100+ AI-generated backend and full-stack solutions against real-world engineering standards, flagging correctness, safety, and scalability issues in Python and Node.js codebases.
- Assessed front-end behavior including state assumptions, data consistency, and integration boundaries affecting user trust and system reliability.
- Compared multiple implementations and selected solutions based on trade-offs in performance, scalability, and risk, improving average solution quality scores by 20%.
- Designed and validated prompts simulating attack vectors, edge cases, and misuse scenarios, improving robustness of AI-driven systems.
- Applied structured reasoning around system failures, ambiguous inputs, and adversarial behavior, aligned with Trust & Risk Engineering principles.

PROGRAMMER ANALYST (FULL-STACK ENGINEER)

August 2022 — Oct 2025

Cognizant

- Designed and maintained distributed microservices in Java (Spring Boot) and Node.js serving 10M+ users, achieving 99.9% uptime across critical services.
- Built responsive UIs using React.js, Next.js, and Vue.js, reducing page load times by 30% through code-splitting and caching optimizations.
- Designed RESTful APIs and microservices architecture for large-scale distributed systems, cutting average API response time from 400ms to under 120ms.
- Built Python-based data processing pipelines and automation scripts for batch jobs and internal tooling, reducing manual processing time by 40%.
- Developed ML-assisted features including anomaly detection on transaction streams and a scikit-learn recommendation module, integrated into Spring Boot services via REST.
- Strong expertise in PostgreSQL, Redis, and MongoDB for data storage, caching, and consistency across high-throughput workloads.
- Implemented observability with Prometheus and Grafana including distributed tracing, cutting mean time to resolution (MTTR) for production incidents by 35%.
- Managed deployments on AWS using Docker, CI/CD pipelines, and Terraform, reducing deployment cycle time by 50%.
- Collaborated with Product, QA, and DevOps across agile sprints to deliver 20+ features on schedule with zero critical post-release defects.

PROGRAMMER ANALYST TRAINEE

Jan 2022 — July 2022

Cognizant

- Built full-stack applications using Spring Boot and React, focusing on input validation, predictable behavior, and testability.

- Developed backend services and APIs with emphasis on clean architecture, defensive coding, and robust error handling.
- Wrote Python scripts for test data generation and automated validation, cutting manual QA effort by ~25% across the team.
- Wrote unit and integration tests achieving 80%+ code coverage, ensuring reliability and maintainability across services.

PROJECTS - (ENTERPRISE CLIENT ENGAGEMENTS)

Macys ~ Full Stack Engineer

Jul 2025 — Oct 2025

- Built production-grade UI components for large-scale POS systems, meeting strict correctness and performance benchmarks across 500+ retail endpoints.
- Investigated data mismatches and latency issues by analyzing SQL queries and transactional flows, resolving 15+ recurring production defects.
- Wrote Python scripts to reconcile and validate POS transaction data, catching data integrity issues before they surfaced in production.
- Collaborated with product and QA to ship stable, trust-critical releases under tight timelines.

DIRECTV~ FullStack +DevOps Engineer

Nov 2023 — Jun 2025

- Designed and operated high-availability Spring Boot + React services consumed by 5+ internal teams, maintaining 99.95% uptime over 18 months.
- Automated infrastructure health checks and log analysis using Python scripts, reducing manual debugging time for distributed service failures by 45%.
- Debugged distributed production issues using logs, metrics, and tracing, cutting incident resolution time from hours to under 30 minutes.
- Improved system reliability by refining API contracts and integration boundaries, eliminating a recurring class of integration failures.

LN Payments~FullStackEngineer

Aug 2022 — Oct 2023

- Built UI and backend services for a payments platform handling \$2M+ in daily transactions, prioritizing correctness and data consistency.
- Implemented asynchronous workflows and background jobs using Spring Boot, processing 50K+ events per day with zero message loss.
- Ensured data integrity across transactional systems and internal tooling, reducing reconciliation errors by 60%.

EDUCATION

ChitkaraUniversity - Rajpura

8.68/10

Aug 2018 – May 2022

SKILLS

Languages:	Java, Python, JavaScript
Backend & Distributed Systems:	Spring Boot, REST APIs, API versioning, Microservices, JWT
Frontend:	React, Next.js, VueJS, ThreeJS, HTML, CSS, Tailwind
Databases:	PostgreSQL, MySQL, MongoDB, SQL performance tuning
Observability & Reliability:	Logs, Metrics, Distributed Tracing, Dynatrace, Incident Debugging
Cloud & DevOps:	AWS, Docker, Kubernetes, GitHub Actions, Jenkins, Terraform
AI & ML:	Python (pandas, NumPy, scikit-learn), LLM evaluation, Prompt engineering, Hugging Face, n8n, Claude, GitHub Copilot
Collaboration:	Cross-functional delivery, documentation, incident response

CERTIFICATIONS

- AWS Cloud Practitioner - Foundational
- AWS Certified Developer - Associate
- AWS Certified AI Practitioner
- GitHub Copilot Certification
